Subscriptions

For 1985, the journal *Solar Energy Materials* is scheduled to appear in 6 issues (1 volume).
The subscription price of a volume is Dfl. 250.00 (US $92.50); postage Dfl. 22.00 (US $8.25); total price Dfl. 272.00 $100.75). The Dutch Guilder price is definitive; the currency equivalent is for your guidance only.
Subscriptions should be sent to the publisher, Elsevier Science Publishers B.V., Journals Department, P.O. Box 1000 AE Amsterdam, or to any subscription agent.
The publisher expects to supply missing numbers free only when losses have been sustained in transit, when reserve stock will permit and when claims have been made within three months following the date of publication.

Scope

Solar technology, in its search for better solutions to problems of performance, durability and cost in existing devices and new conversion techniques encompasses numerous aspects of materials science. Consequently, increasing numbers of papers are published that by technical discipline belong to solid-state physics, metallurgy, ceramics, optics or electrochemistry but derive their significance from their application to solar energy conversion. Solar Energy Materials serves as a focus for papers that would be otherwise scattered over a wide range of journals.

Solar Energy Materials gives high visibility to the materials science aspects of solar energy conversion. It closes the communication gap between the journals of the solar energy engineering societies and that of the classical scientific disciplines where solar materials science may only be treated with secondary importance.

Solar Energy Materials

An international journal devoted to the materials science aspects of photovoltaic, photothermal and photochemical solar energy conversion

No part of this publication may be reproduced, stored in a retrieval system or transmitted in any form or by any means, electronic, mechanical, photocopying, recording or otherwise, without the prior permission of the publisher, Elsevier Science Publishers B.V. (North-Holland Physics Publishing Division), P.O. Box 103, 1000 AC Amsterdam, The Netherlands.

Special regulations for authors – Upon acceptance of an article by the journal, the author(s) will be asked to transfer copyright of the article to the publisher. This transfer will ensure the widest possible dissemination of information.

Submission to this journal of an article entails the author's irrevocable and exclusive authorization of the publisher to collect any sums or considerations for copying or reproduction payable by third parties (as mentioned in article 17 paragraph 2 of the Dutch Copyright Act of 1912 and in the Royal Decree of 20 June 1974 (S. 351) pursuant to article 16b of the Dutch Copyright Act of 1912) and/or to act in or out of Court in connection therewith.

Special regulations for readers in the USA – This journal has been registered with the Copyright Clearance Center, Inc. Consent is given for copying of articles for personal or internal use, or for the personal use of specific clients. This consent is given on the condition that the copier pays through the Center the per copy fee stated in the code on the first page of each article for copying beyond that permitted by Sections 107 or 108 of the US Copyright Law. The appropriate fee should be forwarded with a copy of the first page of the article to the Copyright Clearance Center, Inc., 21 Congress Street, Salem, MA 01970, USA. If no code appears in an article, the author has not given broad consent to copy and permission to copy must be obtained directly from the author. All articles published prior to 1981 may be copied for a per-copy fee of US $2.25, also payable through the Center. (N.B. For review journals this fee is $0.25 per copy per page.) This consent does not extend to other kinds of copying, such as for general distribution, resale, advertising and promotion purposes, or for creating new collective works. Special written permission must be obtained from the publisher for such copying.

ANNOUNCING A NEW SECTION OF
UCLEAR INSTRUMENTS AND METHODS IN PHYSICS RESEARCH

ditor in Chief: Prof. Kai SIEGBAHN (Uppsala)

SECTION B: BEAM INTERACTIONS WITH MATERIALS AND ATOMS

ditors: Prof. Hans Henrik ANDERSEN (Copenhagen), Dr. S. T. PICRAUX (Albuquerque)

ditorial Board:

BERNAS (Orsay)
.K. CHU (Chapel Hill)
A. DAVIES (Chalk River)
. HEILAND (Osnabrück)
ITOH (Nagoya)
M. POATE (Murray Hill)
L. RAVN (Geneva)
E. ROOSENDAAL (Amsterdam)
W. SARIS (Amsterdam)
SIGMUND (Odense)
W. THOMPSON (Norwich)
W. WHITE (Oak Ridge)
S. WILLIAMS (Melbourne)
F. WINTERS (San José)
ija YANG (Shanghai)
F. ZIEGLER (Yorktown Heights)

S $2320.00 (Dfl. 294.00 postage
d handling included).
ction B-Beam Interactions with
aterials and Atoms, Vols. 1-4
2 issues)
ubscription Price: Dfl. 1784.00/
S $686.00 (Dfl. 84.00 postage and
ndling included).

Aims and Scope:

The use of nuclear methods in the study of atomic physics and materials science has expanded rapidly and is now widely used. In response to these developments, a B section of Nuclear Instruments and Methods in Physics Research has been formed which will be devoted exclusively to the interaction of energetic beams with materials and atoms.

The Journal will accept experimental and theoretical papers of original research within all aspects of the interaction of energetic beams with atoms, molecules and aggregate forms of matter. This will include ion beam analysis and ion beam modification of materials as well as basic data of importance for these studies. Topics of general interest include: atomic collisions in solids, in particular channeling, and all aspects of collision cascades, the modification of materials by energetic beams, ion implantation, irradiation-induced changes in materials, the physics and chemistry of beam interactions and the analysis of materials by all forms of energetic radiation. Studies on the modification of electronic materials, metals, ceramics, insulators and other important and new material systems are included. Results from the application of ion-beam analysis applied to e.g. biological, archaeological and geological samples as well as applications to solve problems in planetary science are also welcome. Energetic beams of interest include atomic and molecular ions, positrons and muons, plasmas directed at surfaces, and electron and photon beams, including laser treated surfaces and studies of solids by photon radiation from rotating anodes, synchrotrons, etc. In addition, the interaction between various forms of beams of radiation and synergistic effects which may occur in combined irradiations of matter are relevant.

First regular issue is scheduled to appear in January 1984.

The February 1984 issue will contain the Proceedings of the Second International Conference on Radiation Effects in Insulators, Albuquerque, NM USA, (May 30 - June 3, 1983), eds. G.W. Arnold and J.A. Borders.

EQUEST FORM (Section B-Beam Interactions with Materials and Atoms)

end to North-Holland Physics Publishing, Attn. Ms. C. Schilpp, P.O. Box 103, 1000 AC AMSTERDAM, The Netherlands.

Please send me a complete brochure with full details as soon as available
Please send me a free inspection copy of the first regular issue (Jan. 1984)
I would like you to add my name to your mailing list and receive additional information concerning this project on a regular basis

Japan Annual Reviews in Electronics, Computers & Telecommunications (JARECT), Volume 16

Amorphous Semiconductor Technologies & Devices (1984)

edited by **Y. Hamakawa,** Osaka University, Japan

Comments from the press on previous volumes:

...The Japanese are to be congratulated on their original and outstanding contributions to the field of amorphous semiconductors.

Electronics and Powers

An extremely valuable overview of the state of the art in Japan and their current research...A must for any research library serving those interested in this field.

Cips Reviews

This volume is the third book on Amorphous Semi-conductor Technologies & Devices (the previous being volumes 2 and 6). The contents have been systematically treated and organized, starting with an introduction, then describing from the fundamentals to the applications of six different fields, which are: topics in the basic physics, preparations and growth kinetics, device physics, amorphous silicon solar cells, amorphous semiconductor electronic devices and opto-electronic applications.

Each chapter respectively deals with: physical mechanism of optical absorption, characteristics of a-Si:H, μC-Si, tetrahedral alloys, problems of laser lithography, dry processing and quantum wall, mass production technology of multi-layered cells, TFT, microfabrication technology and the application to memory, CCD, sensor, and image devices.

CONTENTS: Chapters: 1. Introduction. *(Y. Hamakawa).* **2. Some Topics In The Basic Physics.** 2.1. Optical Absorption Properties in Amorphous Silicon Alloys *(F. Yonezawa);* 2.2. Defects in Si-Based Films - ESR and NMR Studies - *(T. Shimisu);* 2.3. Raman & Structure *(T. Shimada);* 2.4. Photo-induced Effect in Hydrogenerated Amorphous Silicon *(K. Morigaki);* **3. New Aspects Of Preparations And Growth Kinetics.** 3.1. Plasma Spectroscopies and Film Deposition *(K. Tanaka);* 3.2. a-Si:H Deposition from Higher Silanes *(M. Hirose);* 3.3. Microcrystalline Silicon Prepared by Plasma-Chemical Techniques *(Y. Osaka and T. Imura);* 3.4. Photo-CVD of a-Si:H *(K. Aota, Y. Tarui and T. Saitoh);* 3.5. Tetrahedral Alloys *(Y. Kuwano and S. Tsuda).* **4. Topics in Device Physics Field.** 4.1. Photo-Generated Carrier Transport *(H. Okamoto);* 4.2. Junction Interface & Phenomena *(Y. Hamakawa);* 4.3. Impurity Effects *(A. Hiraki);* 4.4. Laser Scribing Lithography *(S. Yamazaki, S. Watanabe and K. Itoh).* 4.5. Dry Processing *(A. Yoshikawa and Y. Utsugi).* 4.6. Quantum Wells in Amorphous Semiconductors *(T. Ogino Atsugi and Y. Mizushima).* **5. Amorphous Silicon Solar Cells.** 5.1. p-i-n & n-i-p Basis Solar Cells *(Y. Uchida);* 5.2. Multi-Layers & Stacked Solar Cells *(Y. Hamakawa);* 5.3. Mass Production Technology in a Roll-to-Roll Process *(H. Morimoto and M. Izu);* 5.4. a-Si Cell Industrialization and Systems *(Y. Kuwano and S. Nakano).* **6. Amorphous Semiconductor Electronic Devices.** 6.1. Thin Film Diodes and Transistors *(M. Matsumura);* 6.2. TFT Applications *(S. Nagata);* 6.3. Microfabrication Technology Using Multicomponent Amorphous Alloy *(K. Murase, Atsugi and Y. Mizushima);* 6.4. Anodization Oxidation and Its Device Applications *(H. Hasegawa, H. Yamamoto, S. Arimoto and H. Ohno).* **7. Opto-Electronic Applications Of Amorphous Semiconductors.** 7.1. Amorphous Optical Memory *(M. Takenaga);* 7.2. A CCD Imager Overlaid with an a-Si:H Layer *(N. Harada);* 7.3. Amorphous Silicon Linear Image Sensors *(T. Tsukada);* 7.4. Enhancement of Long Wavelength Sensitivity *(I. Shimizu).*

1984. about 300 pages
Price: US $95.00/Dfl. 250.00
ISBN 0-444-87584-0

Subscribers to JARECT are entitled to a 15% discount off the regular single copy price.

Also available:

Amorphous Semiconductor Technologies & Devices, 1983
Volume 6, about 360 pages
Price: US $95.00/Dfl. 250.00
ISBN 0-444-86652-3

Amorphous Semiconductor Technologies & Devices, 1982
Volume 2, xii + 380 pages
Price: US $95.00/Dfl. 250.00
ISBN 0-444-86410-5

Instructions to Authors

Contributions must be written in English and should have an abstract. They should be submitted in triplicate to the General Editor. The submission of a paper will be taken to imply that the author has satisfied himself that no copyright will thereby be infringed.
Upon acceptance of an article, the author(s) will be asked to transfer copyright of the article to the publisher. This transfer will ensure the widest possible dissemination of information.

Manuscripts should be typewritten with double spacings and wide margins. First copies (or clear xerographic prints thereof) are needed for the printer.

Displayed formulae should be numbered and typed or clearly written by hand. Vectors will be printed in bold-face italics (heavy, slanting type) and should be indicated by a wavy underlining in the typescript. Otherwise, no symbols should be underlined. Special attention should be paid to characters which can easily be misread such as i (lower case), l (cap.), l (el), 1 (one), ' (prime), o (lower case), O (cap.), 0 (zero), u, v (lower case), ν (Greek nu), V (cap.), s, S, x, X, χ, p, P, ρ (Greek rho), etc. If necessary, unusual symbols should be explained in pencil in the margin.

Each table should be typed on a separate sheet and could have a title in addition to its serial number.

Line drawings for the figures should be originals, drawn in black India ink and carefully lettered (with the use of stencils). The lettering as well as the details should have proportionate dimensions so as not to become illegible or unclear after the usual reduction by printers; in general, the figures should be designed for a reduction factor of two to three. Glossy prints of these figures can be accepted only if they are of good quality (well-focused, so as to show no blurred or broken parts).

Photographs should be unmounted, unless they form part of a composite figure, and somewhat more contrasty than is desired in the printed version. Where necessary the top edge should be identified on the back. The scale should be drawn on the photograph itself, not below. The parts of the figures that may be cropped should be marked on the back. Photographs should not be stapled to each other. Original ink drawings and photographs will be returned after publication of the paper. Each figure should have a number and a caption. The captions should be collected on a separate sheet.

References to other papers should be consecutively numbered in the text: "Roth [1] has reported that...", and listed at the end of the typescript as in the following examples:

[1] A. Roth, Vacuum Technology (North-Holland, Amsterdam, 1976).
[2] H. Ibach, H. Hopster and B. Sexton, Appl. Surface Sci. 1 (1977) 1.
[3] E.S. Davie, D.A. Whan and C. Kemball, in: Catalysis, Proc. 5th Intern. Congr., Miami Beach, FL, 1972, ed. J.W. Hightower (North-Holland, Amsterdam, 1973) p. 1205.

Footnotes should be avoided as far as possible.

Corrections in the proofs should be limited to printer's errors; due to the time-consuming and expensive work involved, any other changes in the proofs may be charged to the authors. They should therefore check their manuscript carefully for typographical errors and small changes. The submitted paper should be in final form.

Page charges and reprints: There will be no page charges and 25 reprints of the article will be supplied free of charge. Additional reprints may be ordered from the Publisher. An order form will be sent to contributors together with the proofs.
